

Enterprise Application Integration

Overview

SIS offers a robust & flexible integration solution to connect Microsoft Dynamics with industry leading construction applications such as:

- Procore
- Autodesk
- Textura
- HCSS
- and more

SIS Construct 365 Connector provides a purpose-built adapter to connect with Microsoft Dynamics 365 Finance & Supply Chain management.

Prebuilt Connectors

Ready to integrate processes between construction applications and Microsoft Dynamics 365.

Low Code / No Code

The C365 Connector listens to business events that occur and automatically initiates the integrated transactions.

There is no need for file based, user triggered, schedule, or batch-based processing of integrated data.

Orchestration & Workflow

The C365 Connector adopts powerful Microsoft Azure Integration services to enable custom business process and workflow integration solution using Microsoft Azure Integration services.

Configurable

The integration interfaces or data entities are configurable with no coding required.

The interface's configuration can be modified to meet customer's requirements.

Near Time Data Transfer

Leverage the configuration console to add or modify new data entities and source/ destination application endpoints.

All the standard business processes are supported without having to write any code.

Easy to Update

Upgrade and deployments can be made with no or little downtime.
